

Let's start your Copic journey with some basic warmup techniques. Make sure you have a thin marker paper for best results. Put this practice sheet underneath and let's first try the nibs to apply different strokes.

Brush

Chisel

Fill evenly

LAYER

Layer the same colour several times to see how it becomes deeper and more saturated, it is easier to see with lighter tones. You can try applying layers 'wet' for a softer effect or when the previous layer is dry for a sharper transition. Try it out and practice.

MIX

Layer different colours and see the mixes you can create. Let the layers dry to keep your nib clean and experiment with the order of application. When you have deep or dark colours in the mix you might need more layers with a lighter colour to change the shade.
